

SECURE  
VISITOR  
MANAGEMENT

**iVisitor**

Secure Visitor Management for Government Installations

With security concerns on the rise, **visitor management** has become a more **critical** component to an Integrated Base Defense. **iVisitor** mitigates this newly-heightened concern by providing an immediate solution for **managing and tracking visitors** to secure your base. The productivity of your visitor center will increase through **enhanced base security**, reduced personnel, paper process elimination and streamlined visitor management.

### STREAMLINED VISITOR PROCESSING

Utilizing a secure connection, base personnel can pre-register visitors through a webpage from any computer, anytime, anywhere. Upon arrival, visitors enter their information into the iVisitor kiosk and a match is quickly called up from the electronic Entry Authority List (EAL), eliminating the need for manual entry by visitor center personnel. Upon verification, a customized ID, such as an AF 75, is printed and the sponsor is notified via email or pager.

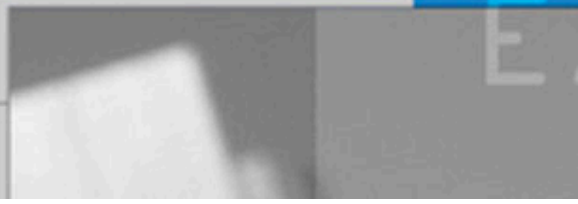

### WORLDWIDE BARMENT SCREENING AND ALERTS

Utilizing InfrSAFE's patent-pending engine, iVisitor detects and deters potential security breaches before they impact you. Unwanted guests, ranging from barred individuals to known felons, are imported into the engine to alert personnel of a potential threat to your installation. Bases across the world can be connected to share a common barment database and interlaced with other national criminal databases. When a visitor is scheduled, scans and crosschecks can be performed to ensure they are a permitted visitor. If an alert is necessary, the appropriate personnel is notified.

### SECURED ELECTRONIC ENTRY AUTHORITY LIST (EAL)

No longer is sensitive visitor information kept on paper reception logs, but secured electronically and only available to authorized users. This visitor data can be accessed quickly, eliminating the need for manually-intensive paper searches. iVisitor utilizes the latest security technologies and SSL encryption to ensure the utmost in privacy, security, and integrity of all your visitor data.

## CUSTOM VISITOR PASS PRINTING

For added visual identification, iVisitor records all visitor information in user defined badge layouts. This allows for the production of an unlimited number of customized ID badges and standard forms such as the AF 75. Since only inputted visitors can be issued a badge, iVisitor ensures that your visitor processing faster, smarter and more secure.

## REAL-TIME REPORTING FROM ANYWHERE

With iVisitor, visitor data becomes available and easily accessible from anywhere in the world. The real-time search capabilities and visitor status reports provide your base with a new level of visitor tracking and management. In case of an emergency, the full functionality of iVisitor is maintained, allowing for the real-time collection of who is on the base from anywhere in the world. Authorized personnel can also analyze detailed audit reports to make changes in organizational policies and procedures to match visitor traffic. The result is enhanced operations through increased productivity and efficiency.

*iVisitor provides the solution for managing your visitors, securely and efficiently. Take advantage of our 35+ years expertise, allowing your organization to stay focused on your core mission with complete confidence that you will remain secure.*
